Chickasaw Network Services, LLC (CNS) provides professional service in all areas of voice and data cabling including design, engineering, installation and certification. CNS also provides comprehensive service and maintenance of voice and data networks.

We work with a diverse spectrum of physical media including:
- Twisted pair
- Fiber
- Coax
- Category 5e, 6, 6e cable

Fiber optic cabling for building backbone including:
- Campus backbone
- Hub connectivity
- “Fiber to the desktop”

**DISASTER RECOVERY SERVICES**

Our team utilizes the four stages of planning in our disaster recovery preparedness: assess, prepare, respond, and recover. We offer extensive capabilities in disaster recovery operations, including recovering cable systems, telephony systems, and electrical support systems.

The CNS team has expertise in:
- Coax cabling, of any type of size, with connectivity amplifiers, modulators, taps, splitters, terminators, attenuators, adjusting, and testing
- Category 3 or 6 station cabling to support telephones, paging, faxes, modems, etc.
- Installation of a variety of wireless networks in addition to security solutions, Wi-Fi, and VoIP

Our capabilities allow us to perform a variety of construction activities, including telecommunication closets, core drilling, and installation of cable support hardware, conduit trays, rack installation, conduit, and molding pathways.
CABLE TV INSTALLATION SERVICES
Our team is proficient in performing installation services for the Cable TV and Telecommunications industry. Chickasaw Network Services has expertise in single family unit, multiple dwelling unit, and business enterprise customers for service providers nationwide. Our team of technicians are trained in the installation of triple and quad play services. Employees are pre-screened and drug tested to exceed industry guidelines.

PROJECT MANAGEMENT
In addition to our project design and construction services, Chickasaw Network Services offers project management services. Our team will ensure that your project is completed successfully and meets all your objectives. Our expertise and experience in the telecommunications industry will assure that you gain the maximum cost efficiencies while reducing the possibility of project delays. We provide strategic planning, maintain continuous communication, and manage resources, in addition to applying our industry-specific expertise.

Our industry experience includes completing engineering and construction of over 5,000 apartment complexes, and over 1 million apartment units nationwide.

We have engineered, installed, and maintained thousands of wireless cell sites throughout the United States, including distributed antenna systems, small and micro cell systems, and dedicated point-to-point wireless networks.

We have installed fiber to the cell site, as part of the overall wireless infrastructure deployment, in support of AT&T and Verizon wireless.

We have engineered, installed, and maintained thousands of wireless data systems (Wi-Fi) in both the public and private enterprise spaces.

WORKING WITH CNS
When you work with Chickasaw Network Services, not only are you making a decision that ensures the success of your business venture, but you are also working to help preserve an indigenous culture. You are contributing to our mission of providing the resources needed to enhance the lives of the Chickasaw people.

A SINGLE POINT OF CONTACT
With the highly qualified Chickasaw Network Services team, you can strengthen and diversify your supply chain with one contract and one point of contact with a commitment to honesty, integrity, and customer satisfaction. We consistently uses small and diversified businesses as our partners to fulfill the mission and increase value for the customer.
